Sir:

Transmitted herewith for filing is a(n) ☒ Original patent application.  
☒ Utility ☐ Design ☐ Continuation-in-part application

INVENTOR(S): Mark Bernard Hettish

TITLE: SYSTEM AND METHOD FOR REPORTING THE ADDITION AND DELETION OF  
TAPI LINE AND PHONE DEVICES IN ABSENCE OF SUCH NOTIFICATION FROM  
A PBX

Enclosed with this transmittal (submitted in duplicate) are the following:

- ☒ Limited Recognition under 37 CFR § 10.9(b)  
☒ 61 page specification.  
☒ 5 sheets of drawings ☐ formal drawings ☒ informal drawings (one set)  
☒ The Declaration and Power of Attorney ☒ signed ☐ unsigned  
☒ An Assignment Transmittal and Assignment to SIEMENS INFORMATION AND COMMUNICATION NETWORKS, INC.  
☒ Information Disclosure Statement with PTO1449 and two (2) references.  
☒ Filing fee has been calculated as shown below (other than small entity):

For	Number Filed	Number Extra	Rate	Additional Fees
Total Claims	8 - 20	= 0	x \$ 18	\$ 0.00
Indep. Claims	2 - 3	= 0	x \$ 78	\$ 0.00
<input type="checkbox"/> First Presentation of a Multiple Dependent Claim			x \$260	\$ 0.00
			Basic filing Fee	\$690.00
			Total	\$690.00

Please charge my Deposit Account No. 19-2179 in the amount of \$690.00. The Commissioner is hereby authorized to charge any fees that may be required, or credit any overpayment to Deposit Account No. 19-2179 pursuant to 37 CFR 1.25. A duplicate copy of this sheet is enclosed.

PLEASE MAIL CORRESPONDENCE TO:  
 Siemens Corporation

**BEFORE THE OFFICE OF ENROLLMENT AND DISCIPLINE  
UNITED STATE PATENT AND TRADEMARK OFFICE**

**LIMITED RECOGNITION UNDER 37 CFR § 10.9(b)**

Andreas Horst Lothar Grubert is hereby given limited recognition under 37 CFR § 10.9(b) as an employee of Siemens Corporation to prepare and prosecute patent applications wherein the assignee of record of the entire interest is Siemens Corporation, or one of the following subsidiaries of Siemens Corporation: Pyramid Technology Corporation, Siemens Information and Communication Products LLC (formerly Siemens Pyramid Information Systems, Inc.), Siemens Communication Systems, Inc., Infineon Technologies, Inc. (formerly Siemens Microelectronic Inc., which, in turn, was formerly Siemens Components, Inc.), Siemens Technology to Business, Inc., Siemens Components (Advanced Technology) Sdn. Bhd., Siemens Components (Pte) Ltd., Siemens Energy & Automation, Inc., Siemens Information Systems, Inc., Siemens Medical Systems, Inc., Siemens Power Corporation, Siemens Automotive Corporation, Siemens Information and Communication Networks, Inc. (formerly Siemens Telecom Networks and Siemens Business Communications Systems, Inc., which, in turn, was formerly Siemens Rolm Communications Inc.), Siemens Information and Communication Products LLC (formerly portions of Siemens Business Communication Systems, Inc., and Siemens Nixdorf Information Systems, Inc.), Siemens Corporate Research, Inc., Crystal Technology, Potter & Brumfield, Inc., Siemens Business Services LLC (formerly Siemens Nixdorf Information Systems, Inc.), Siemens Nixdorf Informationssysteme AG, Siemens Nixdorf Information Systems S.A./N.V., Siemens Nixdorf Information Systems S.A., Siemens Nixdorf Information Systems Ltd., Siemens Nixdorf Informatica S.p.A., Siemens Nixdorf Informatiesystemen B.V., Siemens Nixdorf Informatiesystemene Ges.m.b.H., Siemens Nixdorf Informatiesystemene AG, Siemens Nixdorf Sistemas de Información S.A., Siemens Nixdorf Printing Systems L.P., Siemens Hearing Instruments, Inc., Siemens Quantum, Inc., Siemens Stromberg-Carlson, Rofin-Sinar, Inc., Siemens Transportation Systems, Inc., Advanced Nuclear Fuels Corp., Siemens Private Communications Systems, Inc., Cardion, Inc., Siemens Duewag Corporation, Duewag AG, Siemens Solar Industries L.P., Siemens Industrial Automation, Inc., OSRAM SYLVANIA Inc., Osram GmbH, Osram S.A., Osram Ltd., Osram Società Riunite Osram Edison-Clerici S.p.A., Osram S.A. de C.V., Osram Argentina S.A.C.I., Osram do Brasil-Compannia de Lâmpadas Elétricas S.A., Osram-Melco Ltd., Siemens Audio Inc., Siemens Credit Corporation, Siecor Corporation, SIBAG Investments, Inc., Vacuumschmeize GmbH, Siemens Matasushita Components GmbH & Co. KG, Siemens S.A., Siemens A/S, Siemens Osaakeyhtiö, Siemens A.E. Elektrotechnische Projekte und Erzeugnisse, Siemens plc, Siemens Ltd., Siemens S.p.A., Siemens Nederland N.V., Siemens AG Österreich, Siemens AB, Siemens-Albis AG, Simko Ticaret ve Sanayi A.S., Siemens Electric Ltd., Siemens S.A. de C.V., Siemens K.K., Siemens Pakistan Engineering Co. Ltd., Siemens Telecommunication Systems Ltd., Bosch-Siemens Hausgäte GmbH, Linotype-Hell AG, Tela Versicherung Aktiengesellschaft, GPT Holdings Ltd., Siecor Corporation, and Equitel S.A. Equipamentos e Sistemas de Telecomunicações. This limited recognition shall expire on the date appearing below, or when whichever of the following events first occurs prior to the date appearing below: (i) Andreas Horst Lothar Grubert ceases to lawfully reside in the United States, (ii) Andreas Horst Lothar Grubert's employment with Siemens Corporation ceases or is terminated, or (iii) Andreas Horst Lothar Grubert ceases to remain or reside in the United States on an L-1 visa.

This document constitutes proof of such recognition. The original of this document is on file in the Office of Enrollment and Discipline of the U.S. Patent and Trademark Office.

Expires: September 21, 2001

A portion of the disclosure of this patent document contains material which is subject to copyright protection. The copyright owner has no objection to the facsimile reproduction by anyone of the patent document or the patent disclosure, as it appears in the Patent and Trademark Office patent file or records available to the public, but otherwise reserves all copyright rights whatsoever.

10

## BACKGROUND OF THE INVENTION

### FIELD OF THE INVENTION

15

The present invention relates to communications systems and, in particular, to a communication system employing a private branch exchange (PBX) and a TAPI interface.

## DESCRIPTION OF THE RELATED ART

20

The Telephony Application Programming Interface (TAPI) is a high level programming interface for Windows<sup>TM</sup> which supports many types of telephony applications associated with conventional analog public telephone lines, PBX phone lines, ISDN phone lines, and the like. Thus, TAPI allows a communication application to support numerous telephony operations through a variety of mediums by making a function call to TAPI which will drive the hardware (fax/modem card, DSP card, network switch, and the like) coupled thereto.

25

The TAPI architecture 100 is illustrated in FIG. 1. As shown, the TAPI architecture 100 includes a TAPI implementation 104 interfaced to telephony application programs 102. TAPI 104 provides a connection to a TAPI service provider, such as a TAPI server 106, which then interfaces to hardware such as voices cards 108a, H.323 interfaces 108b, or PBX's 108c.

30

The TAPI specification requires that device configuration information

005000-44-000000

be available at the startup of the TAPI service provider. If unsolicited addition and deletion events from a telephony device hardware, such as a PBX, are not supported (i.e., the hardware does not automatically inform the TAPI service provider of updates), the TAPI service provider can only do configuration change updates at start up. The TAPI service provider does so by requesting the static device configuration from the PBX, building the initial internal database and reporting all the devices to the TAPI. If changes are made on the PBX, the telephony server system administrator would be required to shut down the TAPI service provider and restart it again. This has the disadvantage of disrupting service to all users of the TAPI service provider. Moreover, in such a system, there is no way to shut down a TAPI service provider if it is in use. It will be shut down only if every TAPI application using it shuts down. Since several thousand clients can be supported, this can provide severe disadvantages in administration.

### SUMMARY OF THE INVENTION

These and other drawbacks in the prior art are overcome in large part by a system and method for client configuration in a TAPI environment according to the present invention. Briefly, the present invention provides a method whereby a TAPI service provider may request configuration information from hardware such as a PBX. Configuration information received from the hardware is stored in a list and compared to the existing configuration list. Two new lists are then generated: an added list and a deleted list. All devices in the deleted list are deleted from the internal database and deleted messages are sent to the TAPI service provider. All new devices are temporarily added to the internal database and addition messages are sent to the TAPI service provider. The new device configuration list is then saved, and the added devices are marked as permanent.

### BRIEF DESCRIPTION OF THE DRAWINGS

A better understanding of the invention is obtained when the following

detailed description is considered in conjunction with the following drawings in which:

FIG. 1 is a diagram representative of the TAPI architecture;

FIG. 2 is a diagram illustrating a computer system employing a TAPI system according to an implementation of the present invention;

FIG. 3 is a block diagram of the computer system of FIG. 2 according to an implementation of the present invention; and

FIG. 4A and FIG. 4B are flowcharts illustrating operation of an implementation of the invention.

### DETAILED DESCRIPTION OF THE INVENTION

FIGS. 2-4 illustrate an improved system and method for a TAPI service provider to request and update configuration information from hardware such as a PBX. Configuration information received from the hardware is stored in a list and compared to the existing configuration list. Two new lists are then generated: an added list and a deleted list. All devices in the deleted list are deleted from the internal database and deleted messages are sent to the TAPI service provider. All new devices are temporarily added to the internal database and addition messages are sent to the TAPI service provider. The new device configuration list is then saved, and the added devices are marked as permanent.

An exemplary TAPI client 202 is shown in FIG. 2. The TAPI client 202 may be embodied as a personal computer, including a system unit 11, a keyboard 12, a mouse 13, and a display 140. Also shown are one or more speakers 150a, 150b, and a microphone 1601. The screen 160 of the display device 14 is used to present a graphical user interface (GUI) and particularly, a TAPI client window 3008. The graphical user interface supported by the operating system allows the user to employ a point and click method of input, i.e., by moving the mouse pointer or cursor (not shown) to an icon representing a data object at a particular location on the screen 160 and pressing one or more of the mouse buttons to perform a user command or selection. The GUI may be any of the Windows GUIs available from

Microsoft Corporation or the Macintosh OS, available from Apple Computer.

FIG. 3 shows a block diagram of the components of the personal computer shown in FIG. 2. The system unit 11 includes a system bus or a plurality of system buses 21 to which various components are coupled and by which communication between the various components is accomplished. The microprocessor 22 is coupled to the system bus 21 and is supported by the read only memory (ROM) 23 and the random access memory (RAM) 24 also connected to the system bus 21. The microprocessor 22 may be embodied as any of a variety of microprocessors, including Intel x86, Pentium or Pentium II or compatible processors.

The ROM 23 contains among other code the basic input output system (BIOS) which controls basic hardware operations such as the interaction of the disk drives and the keyboard. The RAM 24 is the main memory into which the operating system and applications programs are loaded. The memory management chip 25 is connected to the system bus 21 and controls direct memory access operations including passing data between the RAM 24 and hard disk drive 26 and floppy disk drive 27. A CD ROM drive (or DVD or other optical drive) 32 may also be coupled to the system bus 21 and is used to store a large amount of data, such as a multimedia program or a large database.

Also connected to the system bus 21 are various I/O controllers: The keyboard controller 28, the mouse controller 29, the video controller 30, and the audio controller 31. The keyboard controller 28 provides the hardware interface for the keyboard; the mouse controller 29 provides the hardware interface for the mouse 13; the video controller 30 is the hardware interface for the video display 14; and the audio controller 31 is the hardware interface for the speakers 15 and microphone 16. The speakers 150a, b and the microphone 1601 allow for audio communication during telephony operation. In operation, keyboard strokes are detected by the keyboard controller 28 and corresponding signals are transmitted to the microprocessor 22; similarly, mouse movements and button clicks are detected by the mouse controller and provided to the microprocessor 22. Typically, the keyboard controller 28

and the mouse controller 29 assert interrupts at the microprocessor 22. In response, the microprocessor 22 executes a corresponding interrupt routine, as is known. Additionally, an interrupt controller (not shown) may be provided to arbitrate among interrupt requests. An I/O controller or network interface

5 40 enables communication over a network 46, such as a packet network.

One embodiment of the present invention is as a set of instructions in a code module resident in the RAM 24. Until required by the computer system, the set of instructions may be stored in another computer memory, such as the hard disk 26, on an optical disk for use in the CD ROM drive 32, or a  
10 floppy disk for use in the floppy disk drive 27.

As shown in the figure, the operating system 50, the TAPI application 52, the TAPI service provider 53, and one or more configuration table objects 56 are resident in the RAM 24. As is known, the operating system 50 functions to generate a graphical user interface on the display 14. The TAPI  
15 application program 52 performs TAPI functionality, including generation of a TAPI client window 3008 (FIG. 2) in the GUI. The TAPI service provider 53 implements an interface to the hardware, as will be described in greater detail below.

Turning now to FIG. 4A and 4B, a flowchart illustrating operation of an  
20 implementation of the invention is shown. Upon startup, in a step 402, the TAPI service provider 53 requests static configuration information from the PBX (not shown) or other telephony hardware. Such static configuration information can be static line or static phone device information. In the case of a line device, the configuration information includes the device ID and the  
25 number of addresses on the line. In the case of a phone device, the information includes the device ID. Turning back to FIG. 4A, in a step 404, the PBX returns multiple blocks of information of PBX configuration information to the TAPI service provider 53. Next, in a step 406, the TAPI service provider 53 instantiates and builds a static configuration table object  
30 (C1).

In normal operation, devices are added or deleted to the PBX without notifications being sent to the TAPI service provider 53. Turning now to FIG.

4B, in a step 408, the administrator may request the TAPI service provider 53 check for PBX configuration changes. In a step 410, the TAPI service provider 53 requests static information from the PBX. In a step 412, multiple blocks of information containing the PBX configuration data arrive at the TAPI  
 5 service provider 53. In a step 414, the TAPI service provider 53 instantiates and builds a new static configuration table object (C2). This new object becomes the current TAPI configuration object. In a step 416, the TAPI service provider 53 takes the C2 object as an input and produces two new configuration table objects: deleted objects (C3) and added devices (C4).

10 In a step 418, for each device in C3, the TAPI application 52 is notified that the corresponding line device has been deleted. In a step 420, for each device in C3, the TAPI application 52 is notified that the corresponding phone device has been deleted. In a step 422, for each device in C4, the TAPI application 52 is notified that the corresponding line device has been added.  
 15 Finally, in a step 424, for each device in C4, the TAPI application 52 is notified that the corresponding phone device has been added.

Further details regarding a specific implementation of a system and method according to the present invention are shown in the attached Appendix. It is noted, however, that the invention is not limited to the specific  
 20 form set forth herein, but includes such alternatives, modifications and equivalents as can reasonably be included within the spirit and scope of the appended claims.

1        1. A method for updating configuration information in a TAPI system,  
2        comprising:  
3            storing configuration information in a first configuration table object;  
4            requesting update static configuration information from a telephony  
5        device;  
6            receiving said update static configuration information; and  
7            storing said static update configuration information for system use as a  
8        second configuration table object.

1

2        3. A method in accordance with claim 2, comprising notifying said TAPI

3        system that each device in said deleted devices configuration table object has

4        been dynamically deleted

2 5. A TAPI system, comprising:

3 means for storing configuration information in a first configuration table object;

4 means for requesting update static configuration information from a telephony

5 device;

6 means for receiving said update static configuration information; and

7 means for storing said static update configuration information for system use

8 as a second configuration table object.

1           7. A system in accordance with claim 6, further comprising means for  
2 notifying said TAPI system that each device in said deleted devices configuration  
3 table object has been dynamically deleted.

1           8.       A system in accordance with claim 6, further comprising means for  
2 notifying said TAPI system that each device in said added devices configuration  
3 table object has been dynamically deleted.

## ABSTRACT OF THE DISCLOSURE

A TAPI service provider may request configuration information from hardware such as a PBX. Configuration information received from the

Two new lists are then generated: an added list and a deleted list. All devices in the deleted list are deleted from the internal database and deleted messages are sent to the TAPI service provider. All new devices are temporarily added to the internal database and addition messages are sent to the TAPI service provider. The new device configuration list is then saved, and the added devices are marked as permanent.

**DECLARATION FOR PATENT APPLICATION & POWER OF ATTORNEY**

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name,

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

**SYSTEM AND METHOD FOR REPORTING THE ADDITION AND DELETION OF  
TAPI LINE AND PHONE DEVICES IN ABSENCE OF SUCH NOTIFICATION  
FROM A PBX**

the specification of which (check one)

☒ is attached hereto.

☐ was filed on \_\_\_\_\_ as Application Serial No.

and was amended on \_\_\_\_\_ (if applicable)

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations § 1.56.

I hereby claim foreign priority benefits under Title 35, United States Codes, § 119 of any foreign application(s) for patent or inventor's certificate listed below and have also identified below any foreign application for patent or inventor's certificate having a filing date before that of the application on which priority is claimed:

PRIOR FOREIGN APPLICATION(S)

Priority claimed

(Number)	(Country)	(Day/month/year filed)	Yes	No
----------	-----------	------------------------	-----	----

(Number)	(Country)	(Day/month/year filed)	Yes	No
----------	-----------	------------------------	-----	----

(Number)	(Country)	(Day/month/year filed)	Yes	No
----------	-----------	------------------------	-----	----

I hereby claim the benefits under Title 35, United States Code, § 120 of any United States application(s) listed below and, insofar as the subject matter of each of the claims of this

application is not disclosed in the prior United States application in the manner provided by the first paragraph of Title 35, United States Code, § 112, I acknowledge the duty to disclose material information as defined in Title 37, Code of Federal Regulations, § 1.56(a) which occurred between the filing date of the prior application and the national or PCT international filing date of this application:
